

# A. Waldbart and Sons Nursery

## Carpinus betulus 'Fastigiata'

## Pyramidal Hornbeam

Zone: 5-8

Height: 40'

Width: 30'

Crown: Upright pyramidal

Growth Rate: Moderate

Soil: Very tolerant

Drought: Very tolerant

Pests: Very few

Pyramidal Hornbeam is a tree that will do well in all but the worst places. It will take acidic, alkaline, clay, loam, sand, drought and even some standing water and keep right on growing. It is very drought tolerant and keeps looking good all year long. Unfortunately, the name is a bit of a misnomer. Don't expect this tree to stay very columnar very long, it will spread out to 30' in time.
