

Quercus phellos

Willow Pin Oak

Zone: 5-9

Height: 70'

Width: 40'

Crown: Round with age
Growth: Fast
Soil: Clay, loam, sand
pH: Acid, neutral
Drought: High tolerance
Drainage: Well drained
Salt: High tolerance
Breakage: Resistant

This is a widely used shade tree in the East and South. Pyramidal shape as a young tree gives way to a more rounded appearance with age. Light green straplike leaves turn a brilliant yellow in fall before falling to the ground. It will grow in wet sites but is drought tolerant. This is an urban tough tree, adapting to hard sites. The acorn is small and not showy. Pests and disease are not a serious problem.
